## Product Description

### AMmobile – Your Mobile Solution for AccountMate

Allow your salespeople to stand out from the crowd by giving them access to the most customizable, modern, and fully native iPad app for AccountMate available on the market today. AMmobile can be molded to meet your salespeople’s wants and needs and make the process of selling faster, easier, and smoother. Give your salespeople access to accurate & up-to-date inventory counts to eliminate over-sold products that lead to unhappy customers.

### Customers

Edit and view all of your customer's information on your iPad while on the go so you're always informed and up to date. View your customer's address on a map and get turn by turn directions to any of their addresses. Read your customer's notepad and add new notes while on location. View customer totals, the status of current and history transactions with the ability to drill down to the transaction level.

### Transactions

Create and edit quotes and orders and view invoices for all of the customers on your iPad. Add and ship line items while at a trade show or showroom with a few taps or by scanning an item's barcode using the optional barcode scanning feature on the Infinea Tab™ (sold separately). Accept cash, check, and credit card payment for items you've handed to a customer on location with AMmobile's integration with Authorize.Net.

### Inventory

View your inventory to see current available and on order quantities for each warehouse with drill-down details of each. Give a prospective customer an idea of what an item looks like with the built in inventory item image viewer with pinch-to-zoom support. Inventory item image not correct? Quickly update any inventory item image using the iPad's built in camera or use an image from your company's website.

### Company Profile

iSOFT Systems, LLC, located in the high desert of Southern California, has delivered custom modifications and top quality support to the AccountMate community since 1990. In 2012, they began development on a mobile platform that would revolutionize the way users interact with AccountMate on the go. AMmobile launched mid-2013 and has been growing ever since.
