

JobCost Module for AccountMate

Product Description

JobCost is designed to provide the tools to maximize productivity and profitability for the small to mid-sized business that needs job or project costing. It is seamlessly integrated with AccountMate's accounts payable, accounts receivable, payroll, inventory control, purchase order and sales order modules for their SQL platform. JobCost's functionality and interface are so similar to AccountMate's; it actually appears to be an AccountMate module.

In the Estimating function, a detailed estimate can be efficiently created with user defined cost codes. An estimate can also be created by copying a prior estimate, template or Excel worksheet. Within the change order function, an estimate for the new change order can be created which is combined with the original estimate to become the working estimate.

The contractor or project manager controls and manages the project with easy access to information such as the project status, important dates, key personnel, billing method, retention percentage, percentage complete, earned revenue, contract amount and billed to date amount. Since the actual costs are posted to the projects from the AccountMate modules in real time, the project manager can quickly review the up to date costs in detail or summarized by cost type and compare them to the estimate.

The Payroll function provides options to post the actual workers compensation insurance, employer payroll taxes and/or overhead costs to the projects. The payroll import feature imports payroll data from the time and attendance application or outside payroll service.

While JobCost utilizes AccountMate screens in the various modules, the purchase of AccountMate source code is not required. Source code is available for JobCost.

Company Profile

Viable Accounting Solutions' staff have extensive backgrounds in accounting, consulting, construction, system design, programming and technical support. Each staff member has over 15 years of AccountMate experience. With this expertise, they provide their clients with solid and practical solutions to meet their business requirements.

Founded in 1990, Viable Accounting Solutions is an AccountMate Elite Business Partner and has received the annual Outstanding Sales Achievement for the Western Region for almost every year since 2008. In 2007, they received a special award as an AccountMate Vertical Solution Partner in Recognition of Innovated Integration for the JobCost Module. In 2008, they received the prestigious President's Award from AccountMate's President David Dierke. In 2011, they received the Exceptional Performance Award from INFOtrac for AccountMate. Accounting Today, a well-known national accounting publication, selected Viable Account Solutions as one of the "Top 100 Technology Pacesetters" in the nation for 2008 and 2009.
